# Dallas-Fort Worth-Arlington Housing Affordability Outlook 1Q2023

## About this Report

Texas Real Estate Research Center economists continuously monitor many facets of both state and local housing markets. *Dallas-Fort Worth-Arlington Housing Affordability Outlook* summarizes significant housing activity and trends as related to affordability in the Dallas-Fort-Worth-Arlington MSA. Home prices reflect single-family existing homes unless otherwise stated. This report does not seasonally adjust home prices.

This publication is designed to be a one-stop resource for information on housing affordability for potential homebuyers in the Dallas-Fort Worth-Arlington MSA. We hope you find them as useful as we do. Your feedback is always appreciated. Send comments and suggestions to [info@recenter.tamu.edu](mailto:info@recenter.tamu.edu).

Dr. Adam Perdue, Dr. Harold D. Hunt, and Reece Neathery

### Purchase Affordability

Affordability remained low in 1Q2023 amid high mortgage interest rates and still-elevated home prices. Year-over-year (YOY) change in both the median and first-quartile sales price was negative, at -1.3 percent and -2.4 percent, respectively (Figure 1 and Table 1).<sup>1</sup> The significant YOY increase in family income seen in 1Q2022 followed years of modest rises (Table 2).

The rapid rise in mortgage interest rates in 3Q and 4Q2022 moderated going into 1Q2023. Rates averaged 6.37 percent in 1Q2023, a slight decrease from 4Q2022, which averaged 6.66 percent (Figure 2). All other things being equal, lower (higher) mortgage interest rates translate into lower (higher) monthly mortgage payments and ease (diminish) purchase affordability. For more information on the effect of mortgage interest rates on purchase affordability, see “[How Higher Interest Rates Affect Homebuying](https://recenter.tamu.edu/articles/tierra-grande/How-Higher-Interest-Rates-Affect-Homebuying-2339)” at [recenter.tamu.edu/articles/tierra-grande/How-Higher-Interest-Rates-Affect-Homebuying-2339](https://recenter.tamu.edu/articles/tierra-grande/How-Higher-Interest-Rates-Affect-Homebuying-2339).

**Figure 1. Median and First-Quartile Sales Prices, Dallas-Fort Worth-Arlington MSA**

Source: Texas Real Estate Research Center at Texas A&M University

<sup>1</sup> The first quartile reflects the lowest-priced 25 percent of homes sold in a particular geography. The first-quartile sales price represents the highest home price among those lowest-priced 25 percent of homes sold. If the price of the lowest 25 percent of homes sold ranges from \$100,000 to \$150,000, then the first-quartile sales price would be \$150,000.

**Table 1. Median Sales Price and First-Quartile Sales Price by Quarter**

Year	Median Home Price	YOY Change	First-Quartile Home Price	YOY Change
1Q2011	\$139,900		\$85,000

### **Repeat Homebuyer**

Despite significant YOY growth in family income and negative home price growth, the gap between home price and family income remained wide. For households earning the median family income for Dallas in 2022 (\$97,400), the median sales price for 1Q2023 was not affordable unless the home price-to-income multiplier exceeded 4 (Table 3). Only 27.1 percent of homes sold in the quarter were affordable to households earning the median family income with a home price-to-income multiplier of 3 (Table 4). Households would have to earn \$125,000 annually to be able to afford the median sales price with a home price-to-income multiplier of 3.

## Mortgage Interest Rate

Holding home price constant, the total monthly mortgage payment increases as the mortgage interest rate increases (Table 5). At a 6.37 percent rate, this payment was \$3,079 for the median sales price in 1Q2023, more than 2.6 times the total monthly mortgage payment for the median-priced home in 1Q2011.

Table 6 shows the home price-to-income multiplier by mortgage interest rate. A 6.37 percent interest rate translates into a home price-to-income multiplier of 3,<sup>2</sup> meaning a household could afford a maximum home price three times its annual income. The home price-to-income multiplier declines as the mortgage interest rate increases.

The income required to qualify for a loan with a 6.37 percent mortgage interest rate was \$123,161 for the median sales price in 1Q2023 (Table 7). An estimated 41.7 percent of homeowners in the Dallas-Fort Worth-Arlington MSA could afford the median sales price in 1Q2023 with a 6.37 percent interest rate (Table 8), a decline of nearly 32 percentage points from 1Q2011.

Note: Assumes a 30-year loan term, 80 percent LTV ratio, 30 percent DTI ratio, and additional costs of homeownership at 4 percent of home price. As repeat homebuyers constitute owner-occupied households, this table reflects income data solely for owner-occupied households.

Sources: American Community Survey, U.S. Census Bureau, and Texas Real Estate Research Center at Texas A&M University

### LTV Ratio

Holding home price constant, the total monthly mortgage payment increases as the LTV ratio increases (Table 9). For an 80 percent LTV ratio, the mortgage payment was \$3,079 for the median sales price in 1Q2023, more than 2.6 times the total monthly mortgage payment for the median-priced home in 1Q2011.

Table 10 shows the home price-to-income multiplier by LTV ratio. An 80 percent LTV ratio translates into a home price-to-income multiplier of 3,<sup>3</sup> meaning a household could afford a maximum home price three times its annual income. The home price-to-income multiplier declines as the LTV ratio increases.

The income required to qualify for a loan with an 80 percent LTV ratio was \$123,161 for the median sales price in 1Q2023 (Table 11). An estimated 41.7 percent of homeowners in the

<sup>3</sup> The home price-to-income multiplier is based on a 30-year loan term, 6.37 percent mortgage interest rate, 30 percent DTI ratio, and property taxes and insurance of 4 percent. A 0.5 percent mortgage insurance premium is added to loans with a 90 percent or more LTV ratio.

Dallas-Fort Worth-Arlington MSA could afford the median sales price in 1Q2023 with an 80 percent LTV ratio (Table 12), a decline of nearly 32 percentage points from 1Q2011.

### DTI Ratio

A 30 percent DTI ratio translates into a home price-to-income multiplier of 3<sup>4</sup> (Table 13), meaning a household could afford a maximum home price three times its annual income at that interest rate. The home price-to-income multiplier increases as the DTI ratio increases.

The income required to qualify for a loan with a 30 percent DTI ratio was \$123,161 for the median sales price in 1Q2023 (Table 14). An estimated 41.7 percent of homeowners in the Dallas-Fort Worth-Arlington MSA could afford the median sales price in 1Q2023 with a 30 percent DTI ratio (Table 15), a decline of nearly 32 percentage points from 1Q2011.

<sup>4</sup> The home price-to-income multiplier is based on a 30-year loan term, 6.37 percent mortgage interest rate, 80 percent LTV ratio, and property taxes and insurance of 4 percent.

**Table 13. Home Price-to-Income Multiplier

### Property Taxes & Insurance

Holding home price constant, the total monthly mortgage payment increases as the annual costs of property taxes and insurance increase (Table 16). Assuming the cost of property taxes and insurance is 4 percent of the home price, a monthly mortgage payment was \$3,079 for the median sales price in 1Q2023, more than 2.6 times the total monthly mortgage payment for the median-priced home in 1Q2011.

Table 17 shows the home price-to-income multiplier by the costs of property taxes and insurance. A 4 percent property tax and insurance rate translates into a home price-to-income multiplier of 3,<sup>5</sup> meaning a household could afford a maximum home price three times its annual income. The home price-to-income multiplier declines as the costs of property taxes and insurance increase.

<sup>5</sup> The home price-to-income multiplier is based on a 30-year loan term, 6.37 percent mortgage interest rate, 80 percent LTV ratio, and 30 percent DTI ratio.

The income required to qualify for a loan with property taxes and insurance at 4 percent of home price was \$123,161 for the median sales price in 1Q2023 (Table 18). An estimated 41.7 percent of homeowners in the Dallas-Fort Worth-Arlington MSA could afford the median sales price in 1Q2023 with property taxes and insurance at 4 percent of home price (Table 19), a decline of nearly 32 percentage points from 1Q2011.

## First-Time Homebuyer

Higher mortgage interest rates and a sustained high first-quartile sales price diminished purchase affordability for DFW's first-time buyers in 1Q2023. Table 20 shows the maximum home price affordable by family income and home-purchasing power. For example, households earning between \$29,200 and \$48,700 annually (i.e., between 31 and 50 percent of median family income) could afford a maximum home price between \$87,600 and \$146,100 with a home price-to-income multiplier of 3. Meanwhile, the range in the maximum home price affordable to that range in household income rises to between \$116,800 and \$194,800 should the home price-to-income multiplier measure 4.

Depending on the home price-to-income multiplier, only households earning approximately \$55,000 annually could afford the first-quartile sales price in 1Q2023. Homeownership is largely not feasible to households earning no more than 50 percent of Texas' median family income. In fact, homeownership generally only becomes viable for households earning at least 80 percent of area median income. Even at that point it largely depends on whether mortgage lenders are willing to accept loans with high home price-to-income multipliers. Moreover, few homes are available for sale at these income thresholds. For instance, with a home price-to-income multiplier of 3, only 12.3 percent of homes for sale were affordable to households earning no more than 80 percent of area median income in 1Q2023 (Table 21).

### Mortgage Interest Rate

Holding home price constant, the total monthly mortgage payment increases as the mortgage interest rate increases (Table 22). A 6.37 percent rate brought the mortgage payment to \$2,728 for the first-quartile sales price in 1Q2023, nearly 3.4 times the total monthly mortgage payment for the same home in 1Q2011.

Table 23 shows the home price-to-income multiplier by mortgage interest rate. A 6.37 percent interest rate translates into a home price-to-income multiplier of 3.05,<sup>6</sup> meaning a household could afford a maximum home price of 3.05 times its annual income. The home price-to-income multiplier declines as the mortgage interest rate increases.

The income required to qualify for a loan with a 6.37 percent mortgage interest rate was \$93,522 for the first-quartile sales price in 1Q2023 (Table 24). An estimated 22.9 percent of renters in the Dallas-Fort Worth-Arlington MSA could afford the first-quartile sales price in 1Q2023 with a 6.37 percent interest rate (Table 25), a decline of more than 39 percentage points from 1Q2011.

Note: Assumes a 30-year loan term, 95 percent LTV ratio, 35 percent DTI ratio, and additional costs of homeownership at 4 percent of home price. As first-time homebuyers constitute renter-occupied households, this table reflects income data solely for renter-occupied households.

Sources: American Community Survey, U.S. Census Bureau, and Texas Real Estate Research Center at Texas A&M University

### LTV Ratio

Holding home price constant, the total monthly mortgage payment increases as the LTV ratio increases (Table 26). For a 95 percent LTV ratio, this payment amounted to \$2,728 for the first-quartile sales price in 1Q2023, nearly 3.4 times the total monthly mortgage payment for the same home in 1Q2011.

Table 27 shows the home price-to-income multiplier by LTV ratio. A 95 percent LTV ratio translates into a home price-to-income multiplier of 3.05,<sup>7</sup> meaning a household could afford a maximum home price of 3.05 times its annual income. The home price-to-income multiplier declines as the LTV ratio increases.

<sup>7</sup> The home price-to-income multiplier is based on a 30-year loan term, 6.37 percent mortgage interest rate, 0.5 percent mortgage insurance premium, 35 percent DTI ratio, and property taxes and insurance of 4 percent.

The income required to qualify for a loan with a 95 percent LTV ratio was \$93,522 for the first-quartile sales price in 1Q2023 (Table 28). An estimated 22.9 percent of renters in the Dallas-Fort Worth-Arlington MSA could afford the first-quartile sales price in 1Q2023 with a 95 percent LTV ratio (Table 29), a decline of more than 39 percentage points from 1Q2011.

### DTI Ratio

A 35 percent DTI ratio translates into a home price-to-income multiplier of 3.05<sup>8</sup> (Table 30), meaning a household could afford a maximum home price of 3.05 times its annual income. The home price-to-income multiplier increases as the DTI ratio increases.

The income required to qualify for a loan with a 35 percent DTI ratio was \$93,522 for the first-quartile sales price in 1Q2023 (Table 31). An estimated 22.9 percent of renters in the Dallas-Fort Worth-Arlington MSA could afford the first-quartile sales price in 1Q2023 with a 35 percent DTI ratio (Table 32), a decline of more than 39 percentage points from 1Q2011.

<sup>8</sup> The home price-to-income multiplier is based on a 30-year loan term, 6.37 percent mortgage interest rate, 0.5 percent mortgage insurance premium, 95 percent LTV ratio, and property taxes and insurance of 4 percent.

As first-time homebuyers constitute renter-occupied households, this table reflects income data solely for renter-occupied households.

Sources: American Community Survey, U.S. Census Bureau, and Texas Real Estate Research Center at Texas A&M University

## Property Taxes and Insurance

Holding home price constant, the total monthly mortgage payment increases as additional annual homeownership costs (property taxes and insurance) increase (Table 33). With a rate of 4 percent of home price, this payment amounted to \$2,728 for the first-quartile sales price in 1Q2023, nearly 3.4 times the total monthly mortgage payment for the same home in 1Q2011.

Table 34 shows the home price-to-income multiplier by the costs of property taxes and insurance. A 4 percent property tax and insurance rate translates into a home price-to-income multiplier of 3.05,<sup>9</sup> meaning a household could afford a maximum home price 3.05 times its annual income. The home price-to-income multiplier declines as the mortgage interest rate increases.

<sup>9</sup> The home price-to-income multiplier is based on a 30-year loan term, 6.37 percent mortgage interest rate, 0.5 percent mortgage insurance premium, 95 percent LTV ratio, and 35 percent DTI ratio.

The income required to qualify for a loan with property taxes and insurance at 4 percent of home price was \$93,522 for the first-quartile sales price in 1Q2023 (Table 35). An estimated 22.9 percent of renters in the Dallas-Fort Worth-Arlington MSA could afford the first-quartile sales price in 1Q2023 with property taxes and insurance at 4 percent of home price (Table 36), a decline of more than 39 percentage points from 1Q2011.

## Overview of Housing Affordability

Housing affordability persistently proves one of the most salient topics in housing markets across the state. Although definitions vary, housing affordability broadly denotes the relationship between home price (or rent) and household (or family) income.<sup>10</sup> As such, housing affordability generally reflects the two housing tenures: owner- and renter-occupied housing. However, Center economists further classify owner-occupied housing affordability into two distinct categories: purchase and repayment affordability.

This report focuses only on purchase affordability. Purchase affordability measures the ability of a household to buy a home. In other words, it reflects home-purchasing potential. Repayment affordability, on the other hand, measures an existing homeowner’s ability to make timely monthly mortgage payments. While purchase affordability involves all potential homebuyers, regardless of whether a household already owns a home, repayment affordability solely involves current homeowners (i.e., only owner-occupied households).

## Measuring Purchase Affordability

The vast majority of homebuyers—86 percent in Texas in 2020—rely on mortgage financing to purchase a home. As such, purchase affordability largely acts as a function of income, wealth, and credit. These three factors typically constitute the primary determinants of a mortgage applicant’s creditworthiness, or the applicant’s ability to repay the mortgage loan, a factor heavily weighed by the mortgage lender in the decision to extend mortgage financing to an applicant. In mortgage financing, income, wealth, and credit materialize through the DTI ratio, LTV ratio, and credit score.<sup>11</sup>

Other factors that affect purchase affordability include the mortgage interest rate, any additional costs of borrowing mortgage capital (such as the mortgage insurance premium, which is generally charged if the LTV ratio is 80 percent or higher), and the additional costs of homeownership—property taxes and insurance.

---

<sup>10</sup> Household income reflects all households in the income distribution, including both family and nonfamily households, which consist of a householder living alone or a householder who shares his/her home with individual(s) of no relation to him/her. Meanwhile, family income includes only households in which the householder lives with at least one other related family member.

<sup>11</sup> There are two types of DTI ratios: “front-end” and “back-end” ratios. The front-end DTI ratio measures mortgage debt as a percentage of household income, while the back-end ratio reflects total household debt—mortgage loans, car loans, credit card loans, student loans, etc.—as a percentage of household income. Should mortgage debt equal \$800 per month and the monthly household income equal \$2,400, then the front-end DTI ratio is 30 percent. Should total household debt equal \$1,200 per month, then the back-end DTI ratio is 50 percent. This report uses the front-end DTI ratio. The LTV ratio measures the household’s down payment as a percentage of the home price. A 5 percent down payment translates into a 95 percent LTV ratio.

Table 37 shows how characteristics of a mortgage loan or applicant affect the maximum home price affordable to a particular household. Holding all else equal, an increase in the loan term decreases the total monthly mortgage payment, which increases the maximum affordable home price. Meanwhile, an increase in the DTI ratio also raises the maximum affordable home price. However, an increase in the mortgage interest rate, LTV ratio, additional costs of homeownership, and additional costs of borrowing mortgage capital increase the total monthly mortgage payment, which decreases the maximum affordable home price and reduces home-purchasing potential.

**Table 37. How Loan, Applicant Characteristics Affect Purchase Affordability**

<b>Loan or Applicant Characteristics</b>	<b>Effect on Purchase Affordability</b>
Mortgage interest rate	An increase in the mortgage interest rate <b>diminishes</b> purchase affordability
Loan term	An increase in the loan term <b>increases</b> purchase affordability
LTV ratio	An increase in the loan-to-value ratio <b>diminishes</b> purchase affordability
DTI ratio	An increase in the debt-to-income ratio <b>increases</b> purchase affordability
Additional costs of homeownership (property taxes and insurance)	An increase in the additional costs of homeownership <b>diminishes</b> purchase affordability
Additional costs of borrowing mortgage capital (such as the mortgage insurance premium)	An increase in the additional costs of borrowing mortgage capital <b>diminishes</b> purchase affordability

Source: Texas Real Estate Research Center at Texas A&M University

The Center uses the home price-to-income multiplier (also known as “home-purchasing power”) to find the ratio between home price and household income, or the maximum home price affordable to a household of a particular income. For example, a multiplier of 3 indicates a household could afford a home priced at three times the household’s income (so, a household earning \$50,000 annually could afford a maximum home price of \$150,000).

The multiplier generally measures lower for conventional borrowers, a function of the lower DTI ratios that such borrowers tend to present, and higher for first-time borrowers, who depict higher DTI ratios. The home price-to-income multiplier typically measures around 3 for the repeat homebuyer, and between 3 and 4 for first-time homebuyers.

This report computes purchase affordability for both repeat and first-time homebuyers. For the repeat buyer, calculations in this report assume the prevailing mortgage interest rate

(6.37 percent in 1Q2023),<sup>12</sup> 80 percent LTV ratio, 30 percent DTI ratio, and property taxes and insurance of 4 percent of home value. First-time homebuyers, who tend to be younger and therefore have not accumulated as much wealth or achieved peak earnings, tend to have higher LTV and DTI ratios. The lower income, wealth, and credit of first-time homebuyers generally reduces the maximum home price affordable to them. The calculations of purchase affordability for first-time homebuyers reflect the prevailing mortgage interest rate (6.37 percent in 1Q2023), 0.5 percent mortgage insurance premium, 95 percent LTV ratio, 35 percent DTI ratio, and property taxes and insurance of 4 percent of home value.
